ABSTRACT OF THE DISCLOSURE

A liquid crystal display device with a pair of substrates with liquid crystal layer therebetween, at least a first conductive layer formed on one of said pair of substrates, at least a first insulating layer formed on the first conductive layer, a plurality of drain signal lines formed on the first insulating layer ~~with-in~~ overlapping relation to the first conductive layer, at least a second insulating layer formed on the drain signal line, and at least a second conductive layer formed on the second insulating layer and elongated substantially along the drain signal line ~~with-in~~ overlapping relation to the drain signal line, wherein the second conductive layer is ~~stand-off~~ spaced from the overlapping region of the first conductive layer and the drain signal line.
